Divergence and Convergence across Eurasia: A Long-term Economic Fluctuations under Climate Change

The Great Divergence between Europe and China has been highlighted in human history. This issue will be provided a new perspective by including the impacts of climate change based on statistical analysis. By collecting the updated data, the long term economic development under climate change in both Europe and China will be compared with statistical evidences. This study belongs to macroscale historical studies with a Big Data basis.

Dr PEI Qing

Assistant Professor, Department of Social Sciences, The Education University of Hong Kong

Dr Qing Pei has joined the Department of Social Sciences, Education University of Hong Kong as an Assistant Professor in 2016. Before joining the department, he used to work as the fellow in the University of Cambridge, UK; the Swiss National Science Foundation Fellow at the University of Zurich, Switzerland; and the Post-doctoral Fellow in the University of Hong Kong. His research interests are running between both physical and human geography, which mainly encompass climate change and human society, contemporary environmental problems and policies, and issues of sustainable development.
